

# High Profile Series™ Baffle Ceiling System

**HunterDouglasContract**

CEILING

Front Row Seat

The High Profile Series™ baffle ceiling system from Hunter Douglas Contract delivers both a strong performance and a uniform aesthetic.

Precise lines and customizable profiles, paired with robust materials and engineering, make High Profile Series baffles appropriate for indoor applications ranging from large convention, stadia and transportation spaces to smaller hospitality and retail settings.

Versatile suspension options and patented brackets allow unhindered access to building systems. The wide range of colors, finishes and profiles allow for creative design applications.

### **Key Features**

- Extruded aluminum profiles with exacting fit and high recycled content.
- Client-specific shapes, materials and finishes as well as integrated lighting options.
- Seamless baffles to 20 feet in length.
- Project-specific suspension systems or robust Unistrut® system.
- Patented locking bracket enables fixing, sliding and demounting.

High Profile Series baffles provide a clean, modern aesthetic that places the architectural details of a ceiling at center stage.

Create your own profiles or choose from standard shapes and lighting profiles to create a signature look where bold materials mask crucial building systems.

# Backstage Pass

# Sneak Peek

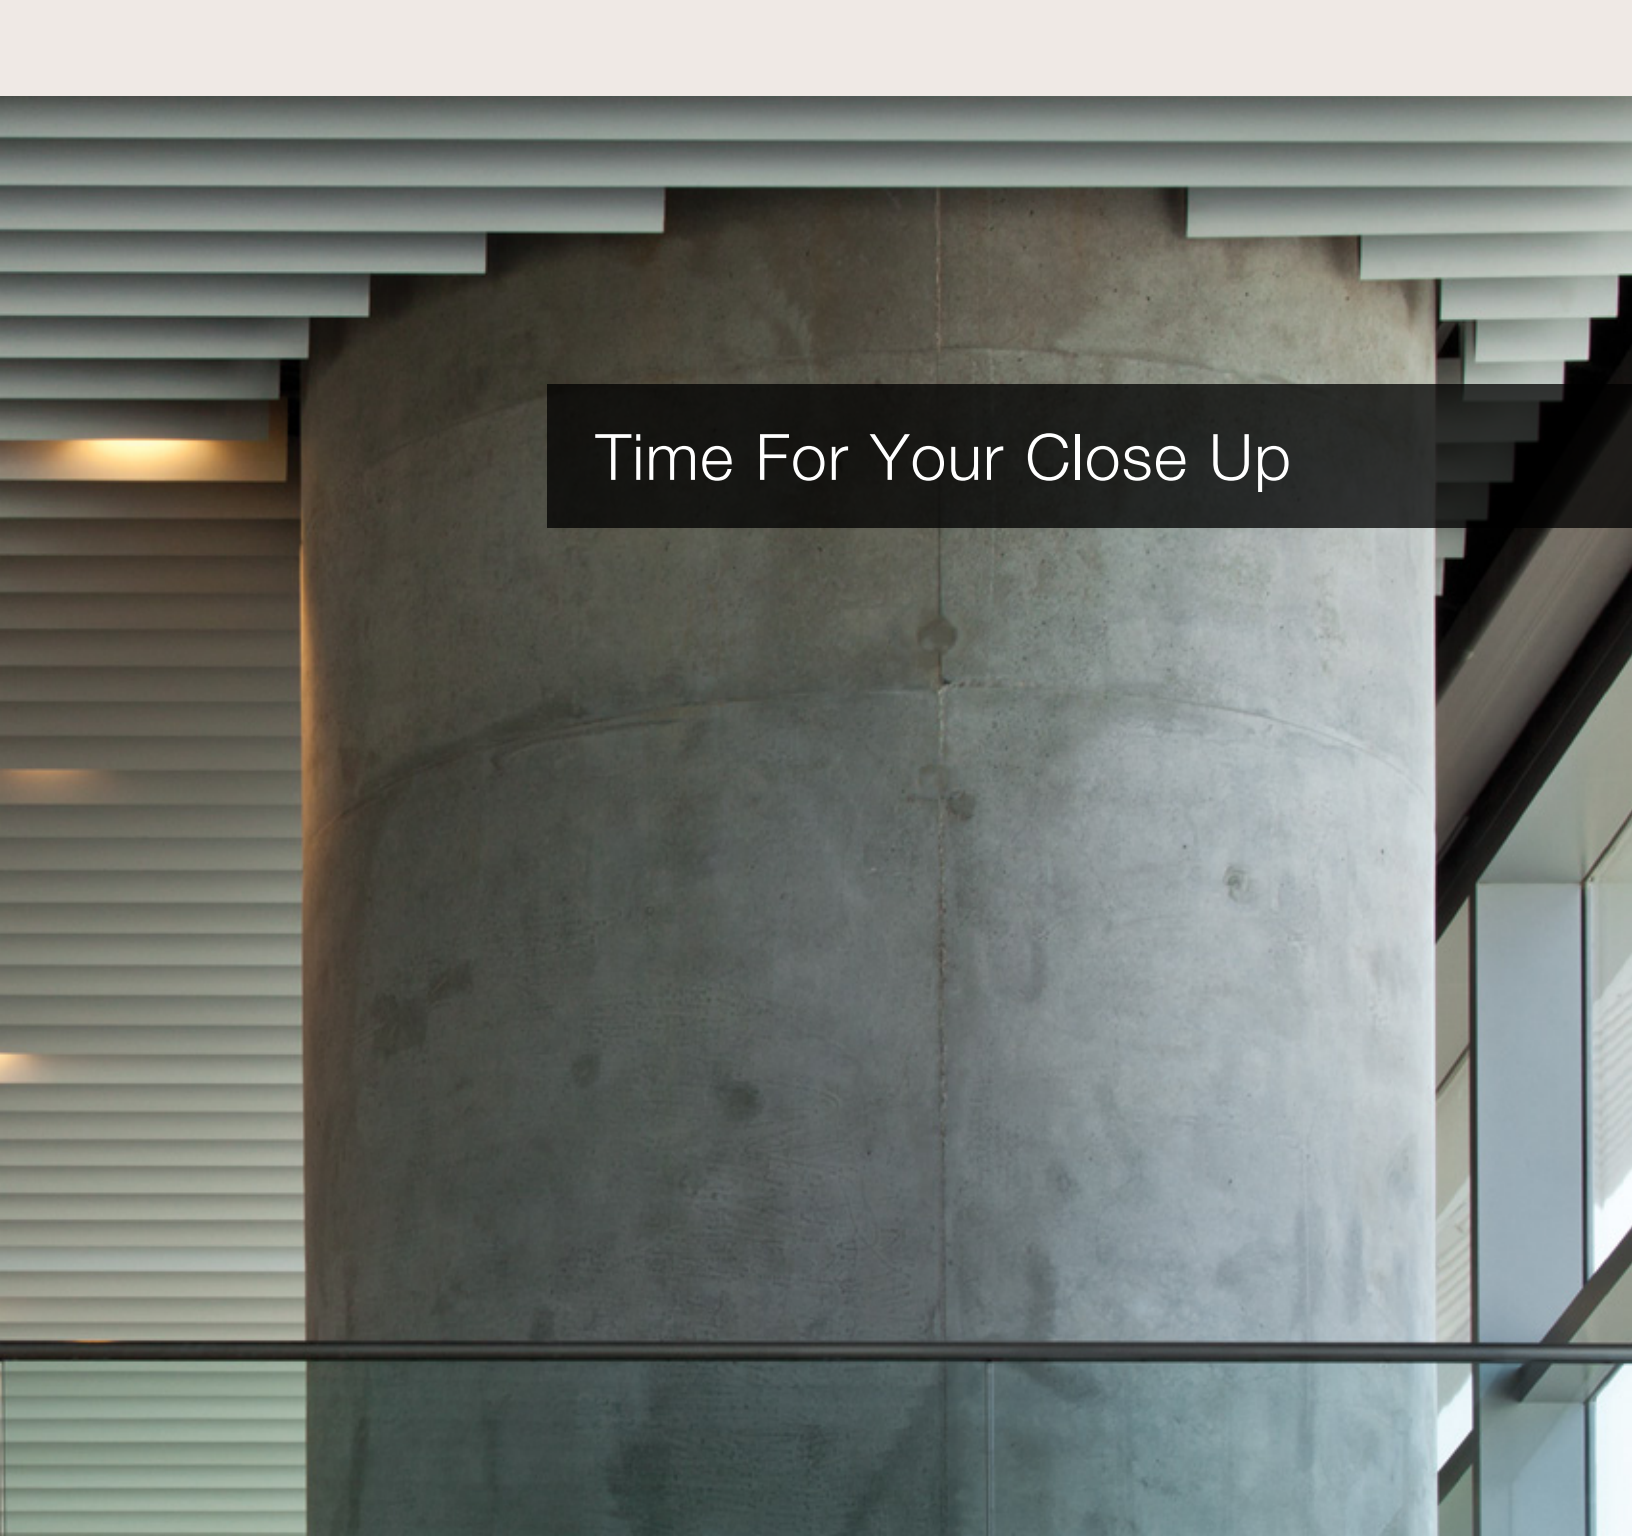

The High Profile Series creates a clean plenum mask that offers easy point access to lighting, HVAC, security, audio and fire safety systems. Baffles easily slide or demount to allow hassle free access for maintenance. The spacious appearance is ideal for large interior spaces, when a more open ceiling plane is desired.

## Time For Your Close Up

Get up close and personal with architectural elements.

The High Profile Series provides precise reveal and perimeter detailing — crisp unit alignment, clean corners, undistorted surfaces and arrow straightness over long baffle lengths.

# Now Remix It

With our precision engineering and fabrication processes, any look is possible. The High Profile Series allows for custom-designed baffles, aerofoils, beams, specialty shapes, materials and finishes, and integrated lighting.

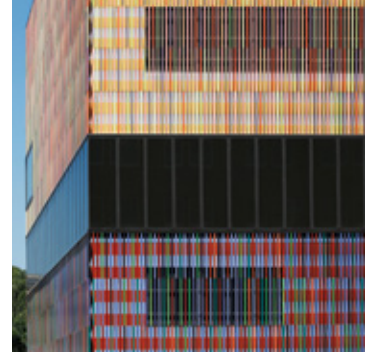

## Your Pass to the Green Room

Hunter Douglas designs and manufactures its ceiling systems to follow the principles of sustainability and indoor environmental quality:

- Our U.S. manufacturing location in Norcross, GA, which produces all metal ceilings for North American markets, qualifies as a zero-landfill facility.
- Hunter Douglas is a longtime member of the U.S. Green Building Council.
- GREENGUARD Gold Certified for Indoor Air Quality.
- High recycled content and recycled aluminum materials.
